Interactive Gardens

In the project INTERACTIVE GARDENS public authorities develop a system of interactive public gardens in order to improve health services for people, and thus better meet their well-being, social and educational needs.

The task of the project is to develop an interactive nature garden concept, taking into account social needs and the diversity of local territories.

The results of the project are intended for state institutions, research and educational institutions, as well as public groups that use the services of public gardens, for the stakeholders of gardens and their communities, as well as for EU strategies and Baltic Sea Region policy.

This #MadeWithInterreg project helps drive the transition to a green and resilient Baltic Sea region.

Organisations from the following countries cooperate together to make that happen:

Latvia, Lithuania, Estonia, Finland, Denmark
